

BATHROOM WALL

MOISTURE RESISTANT

To achieve a high level of moisture control within your bathroom area you can use a single layer of our **Glasroc H TILEBACKER plasterboard** and **50mm Isover Acoustic Roll** in the cavity.

The lightweight board repels moisture and is mould resistant; protecting the board from damage. Glasroc H TILEBACKER can also be used on bathroom floors.

Installation

50mm Isover Acoustic Roll insulation is placed between the studs and then the 12.5mm Glasroc H TILEBACKER is fixed to one side (bathroom) of the timber frame using Gyproc Drywall Screws. Tiles can be applied directly onto Glasroc H TILEBACKER as it is pre-primed (yellow face) for tiling.

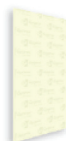

Components needed

Isover Acoustic Roll

A mineral wool roll providing a high level of acoustic insulation in partitions.

Glasroc H TILEBACKER

A superior Gyproc moisture resistant board perfect for use in moisture heavy areas.

Gyproc Drywall Screws

For fixing plasterboard to timber frames.
