

SILENT WALL

ENERGY EFFICIENT

SOUND PROOFING

To achieve a high level of sound insulation between rooms your internal walls can simply be upgraded by using a single layer of 12.5mm Gyproc SoundBloc and 50mm Isover Acoustic Roll positioned in the cavity.

Installation

50mm Isover Acoustic Roll is placed between the timber studs and then the 12.5mm Gyproc SoundBloc is fixed to each side of the timber frame using Gyproc Drywall Screws. The board can then be finished with a 2mm final coat of Gyproc Finish Plaster such as Gyproc Skimcoat or Gyproc Carlite Finish.

Have you considered?

Using two layers of plasterboard - this can potentially improve your sound proofing between rooms by c.30%.

Components needed

Isover Acoustic Roll

A mineral wool roll providing a high level of acoustic insulation in partitions.

Gyproc SoundBloc

Plasterboard with a high density core for enhanced acoustic performance.

Gyproc Drywall Screws

For fixing plasterboard to timber frames.

Gyproc Finish Plaster

Gyproc Skimcoat or Gyproc Carlite Finish are finishing plasters that provide the highest quality aesthetic finish.
