

Saint Gobain Construction Products (Ireland) Ltd. employs a waste strategy of 'waste segregation and diversion from landfill'. Applying the 3 Rs - reduce, reuse and recycle allows for SGCPI to achieve high rates of waste recycling with disposal of waste only if there is no viable option for recovery. A Key Performance Indicators (KPIs) is set for % Recycled Non-Hazardous Waste

#### Waste Strategy

To reduce the quantity of waste diverted to landfill and other disposal options through implementation of the 3 Rs - Reduce, Reuse and Recycle.

#### Waste Streams on Site

##### Non-Hazardous

- Municipal (Domestic) Waste - Black Bin Waste **X**
- Mixed Dry Recyclables - Green Bin Waste ✓
- Scrap Metal ✓
- Envirogrind (Waste Plasterboard) ✓
- Timber ✓
- Waste foil from plasterboards ✓
- Cartridges ✓
- C & D Waste ✓

✓ = Recycled/Recovered

**X = Disposed**

#### Performance on Site:

In 2017, 96.3% of all non-hazardous waste on site was sent for recycling.

#### Hazardous Waste Streams for Site Operations:

- Waste Oils, filters and oily rags ✓
- Fluorescent bulbs ✓
- Laboratory chemicals ✓
- WEEE - electrical waste ✓
- Batteries ✓
- Paints cans/drums ✓

Where possible, hazardous waste streams are recovered. This is common practice for WEEE, fluorescent bulbs and batteries. Oils and chemicals are also recovered by waste contractors where economically viable.

In 2017, 100% of all hazardous waste produced on site was sent for recovery or recycling off site.
